Custom Opening Solutions

S-550

A New Feature Comes to the Liftaway

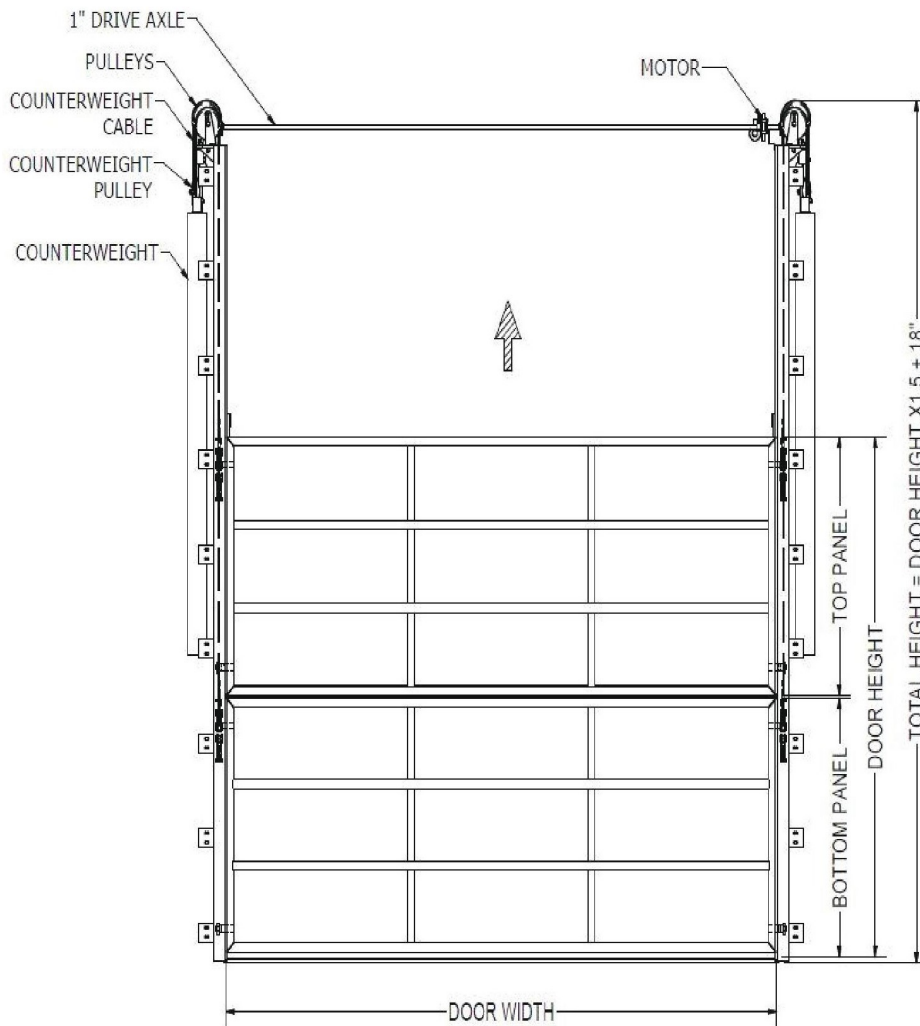

A whole new level of customization and versatility has come to the Renlita lineup. The new S-550 features state-of-the-art technology which reduces the head room and saves space. **The compact design of the S-550 makes installation easy and manageable.** Like all Renlita openings, the S-550 is attached to the jamb directly and uses counterweight balancing technology, which results in a clean, quiet, and smooth opening. Custom cladding is offered with every Renlita product, creating a personalized, one-of-a-kind opening. The new, innovative S-550 is available now.

Features

- *The obstruction sensing REDD™ motor comes standard with every S-550.*
- *Photo Eyes, using Through Beam technology, prevent the S-550 from closing when an obstacle enters its path.*
- *Fail safe device prevents the S-550 from closing in case of a mechanical failure.*
- *Complete turn-key solution.*
- *Interior, Exterior, Residential and Commercial applications.*

Specifications

S-550

Counterweight Balanced System

The frame is constructed from structural steel sections and designed to meet wind loads of 35 psf minimum in the closed position and during operation. The counterweights installed at each jamb will be protected and covered with a removable formed aluminum cover. These covers can be powder coated to match system frame and operating channels.

Operation

The Lift-Away System is a single leaf balanced with counterweights that are located at each jamb. Vertical travel of the door is controlled by multiple guide rollers that glide in operating channels mounted at each jamb.

Size

Maximum Width : 50'
Maximum Height: 20'

Cladding

Wood - Metal - Stone - Glass
Customer Specified
*4" thick
*15 psf
